

Range Identification for Perspective Dynamic Systems Using Linear Approximation

Lili Ma, YangQuan Chen and Kevin L. Moore
CSOIS, Utah State University (www.csois.usu.edu)

- Nonlinear observer for perspective dynamic system;
- Range estimate using a single camera;
- Using linear approximation idea with a sequence of linear time-varying (LTV) observers
- Performance is comparable but it convergences slower.
- More suitable for perspective dynamic system in general settings (e.g., omni-directional vision).
